

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at <http://about.jstor.org/participate-jstor/individuals/early-journal-content>.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

PREVALENCE OF DISEASE.

No health department, State or local, can effectively prevent or control disease without knowledge of when, where, and under what conditions cases are occurring.

RABIES.

Mississippi—Rabies in Animals.

Collaborating Epidemiologist Watkins has submitted the following statement concerning the distribution of rabies in the State of Mississippi. The report contains only information concerning persons who have reported to the laboratory of the State board of health for Pasteur treatment.

The first treatment was begun on December 24, 1914. In each of the cases the animal with which the patient came in contact was examined, either in our laboratory or a laboratory in Memphis, Tenn., or New Orleans, La. In each animal the examination was reported as positive for rabies.

A report of the 26 cases by sex, color, age, and geographic distribution is as follows:

Sex.	Color.	Age in years.	Post office.	County.
Male.....	White.....	53	Madison Station.....	Madison.
Do.....	do.....	14	Carpenter.....	Copiah.
Do.....	do.....	38	Greenwood.....	Leflore.
Female.....	do.....	5	Minter City.....	Do.
Male.....	do.....	13	Attala.
Do.....	do.....	12	Durant.....	Holmes.
Do.....	do.....	3	Schlater.....	Leflore.
Do.....	do.....	28	Minter City.....	Do.
Do.....	do.....	19	Mount Olive.....	Covington.
Female.....	Colored.....	8	Neshoba.
Male.....	White.....	14	Mount Olive.....	Covington.
Do.....	do.....	30	McComb.....	Pike.
Do.....	do.....	33	do.....	Do.
Female.....	do.....	28	do.....	Do.
Male.....	do.....	35	Magnolia.....	Do.
Do.....	Colored.....	41	Collins.....	Covington.
Do.....	do.....	14	Mount Olive.....	Do.
Do.....	White.....	2 ² / ₃	Laurel.....	Jones.
Do.....	do.....	13	Collins.....	Covington.
Do.....	do.....	18	Jackson.....	Hinds.
Do.....	do.....	30	West.....	Holmes.
Female.....	do.....	12	Carthage.....	Leake.
Male.....	do.....	11	do.....	Do.
Do.....	do.....	10	Mount Olive.....	Covington.
Do.....	Colored.....	23	do.....	Do.
Do.....	White.....	19	Collins.....	Do.

The number of cases from each of the counties referred to in the preceding table are as follows: Madison 1, Leflore 4, Holmes 2, Neshoba 1, Jones 1, Leake 2, Copiah 1, Attala 1, Covington 8, Pike 4, Hinds 1; total 26.

In addition to the above cases, we have received information through the county health officers that one case is being treated in Newton County by a local physician, and two cases in Panola County by the county health officer.

It is the intention of the State board of health to prepare a blank and to obtain full information concerning each person that is bitten by, or comes in contact with, a rabid animal, and get a detailed statement concerning each case as to whether the patient received treatment, and if so, from whom. Since the present epidemic of rabies came to notice it has been learned that the disease has existed in the city of Jackson for the past two years, but that it did not spread much until the latter part of December, when we began receiving reports of rabid animals from various portions of the State. At this time, Feb. 12, 1915, we have knowledge of infected animals over an area extending from Panola County in the northern part of the State to Pike County in the southern part; from Newton County in the east to Claiborne in the west. This means that we have an area of more than 20,000 square miles of our State in which this infection is present.

The secretary of the State board of health, realizing the gravity of the situation, sent a letter to each of the county health officers,

asking them to appear before their respective county boards of supervisors and request the boards to take some action to handle the rabies situation. After close inspection of the statutes it was found that there was no authority by which the county boards of supervisors could pass regulations which would in any way prevent dogs from running at large.

Therefore, the secretary of the State board of health called the executive committee of the board for a meeting on February 4, at which time regulations were adopted to be put in operation only in counties in which rabies exists, or in border counties which are probably infected.

A copy of the rules and regulations above referred to will be found on page 649.

South Carolina—Florence.

During the week ended February 6, 1915, a case of rabies in a dog was notified at Florence, S. C.

SCARLET FEVER.

See Diphtheria, measles, scarlet fever, and tuberculosis, p. 638.

SMALLPOX.

Alabama—Austinville.

Passed Asst. Surg. Preble reported by telegraph February 23, 1915, that 6 cases of smallpox had been notified at Austinville, Ala.

California—Imperial County.

Acting Asst. Surg. Richter reported by telegraph February 22, 1915, that during the week ended February 20, 1915, 3 cases of smallpox were notified in Imperial County, Cal.

Minnesota.

Collaborating Epidemiologist Bracken reported by telegraph February 23, 1915, that several new foci of smallpox infection had been reported in the State of Minnesota, cases of the disease having been notified during the seven days ended February 23, as follows: Becker County, Lake View Township, 3; Detroit, 2; Brown County, North Star Township, 1; Cottonwood County, Southbrook Township, 1; Lac qui Parle County, Lake Shore Township, 1; Lincoln County, Hendricks, 2; Nicollet County, Oshawa Township, 1; Nobles County, Adrian, 1; Ramsey County, St. Paul, 3; Steele County, Blooming Prairies Township, 1.
